ABOUT

5th International Dialog on
Population and Sustainable Development

Demographic Dynamics and Socio-Economic Development

October 17, 2006
KfW Branch, Charlottenstraße 33a, 10117 Berlin, Germany

In the 21st century, the current world population of 6.5 billion people will continue to expand, particularly within certain geographical areas. High birth rates are almost exclusively found in countries with a low standard of development, with the fastest growth in the poorest African countries.

The 5th International Dialog on Population and Sustainable Development looks at the factors that determine these demographic trends and how they will affect people's living conditions. The conference specifically addresses the following issues:

- high birth rates in poorer countries and impact on socio-economic development in those regions;
- how people can live peacefully together and, at the same time, earn an adequate income to support their families and preserve the basic conditions needed for future generations to live;
- how women's ability to exercise their sexual and reproductive health and rights within the broader context of cultural and political factors affects demographic trends;
- meeting basic needs appropriately: growing population and its effects on water supply, health care services, foodstuffs, education, energy, traffic facilities, and residential accommodation;
- economic and social aspects of demographic trends and their role in international development cooperation in Poverty Reduction Strategies and the Millennium Development Goals;

The International Dialog languages are German and English.
The conference day will be led by Dr. Ulrich-D. Madeja, Schering, Berlin, Germany.

PROGRAMME

11.30 a.m. Arrival and Registration

12.00 p.m. Welcome

KfW Entwicklungsbank (KfW development bank), Germany
